LEGION

- LEGION Model Builder
- LEGON Simulator

- Vývoj:
Postupná integrácia
s existujúcimi aplikáciami
(OpenBuilding Station Designer)

The screenshot shows the Bentley Legion website. At the top is the Bentley logo and navigation links: Industries, Products, Services, Subscriptions, and User Projects. Below this is a large image of people walking in a modern building, with a dark overlay containing the text "LEGION Improving infrastructure for people". Below the image is a breadcrumb trail "Home > LEGION" and social media icons. The main heading is "Simulation and Modeling Software". The description states: "Simulate and analyze the foot traffic on infrastructure assets that include rail and metro stations, stadiums, shopping malls, and airports. Accurately test designs and operational or commercial plans to enhance footfall, wayfinding, crowd management, and safety and security strategies. With LEGION software, you can optimize the use of space to improve safety, efficiency, and revenue." Below this is a "PRODUCTS" section with two small images.
